Give your child’s teeth a healthy start

Cleaning your child’s teeth
You can start cleaning your child’s teeth with a clean cloth or a small, soft toothbrush.

Lift the lip
Lift your child's top lip once a month to check for early signs of tooth decay. White lines on the top front teeth near the gum can be the beginning of tooth decay.

Toothpaste
0 – 17 months no toothpaste

18 months – 5 years, use low fluoride children’s toothpaste

Please seek dental advice if you notice any changes in your child’s teeth. SA Dental Service recommends a dental visit at around 12 to 18 months.

Free dental care for ALL preschool and most school children at SA Dental Service Clinics

Stop tooth decay!

Breastmilk is best

- Breastmilk or formula
- Cooled boiled tap water from 6-12 months
- Cow's milk after 1 year

Give your child

- Breastmilk or formula
- Cooled boiled tap water from 6-12 months
- Cow's milk after 1 year

Don't give your child

- Soft drink
- Fruit juice
- Flavoured milk
- Cordial
- Coffee/Tea

- If you are not breastfeeding, use infant formula
- Around 6 months, your child can start to eat from a spoon. Start with smooth foods.
- If your child has a dummy, DO NOT put anything sweet on it.
- Clean your child’s dummy under running water NOT in your mouth. Avoid sharing spoons with your child.

If bottle feeding

- Take the bottle away when your child has finished feeding.
- Baby should stop using the bottle by 1 year of age.
- At 6 months your child can use a cup.

Stop tooth decay – Put your child to bed WITHOUT a bottle

- If you are not breastfeeding, use infant formula
- Around 6 months, your child can start to eat from a spoon. Start with smooth foods.
- If your child has a dummy, DO NOT put anything sweet on it.
- Clean your child’s dummy under running water NOT in your mouth. Avoid sharing spoons with your child.
