

KEEPING SAFE AND INDEPENDENT IN HOSPITAL

Government of South Australia
SA Health

Hospitals are unfamiliar places and this can be a challenge when you are also unwell or injured. You might feel dizzy or weaker and less steady than you expect, when you get up. You may be at risk of falling.

Staff want to keep you safe and avoid falls, but we need your help.

What can you do?

Bring these things to hospital:

- > walking aid, glasses and hearing aid/s if you use them
- > comfortable clothing that is not too long, or too loose or tight
- > comfortable well fitting, flat, non-slip shoes or slippers.

During the hospital stay:

- > become familiar with the surroundings
- > get to know your bed controls, and how to use the call bell
- > ask staff for help if you are unsure about anything
- > keep the call bell, your glasses, footwear and walking aid in easy reach, and use them
- > try to move around and do what you can for yourself, if allowed, so that you keep up your strength.

Walking around in hospital

Staff may ask you to have a nurse or other person with you when you get out of bed, and for walking.

Before you get up:

- > please use the call bell and wait until staff come. This is important if you have been asked to call for assistance before getting up, or you feel unsteady
- > put on your shoes or slippers or non-slip socks
- > put on your distance glasses if you have them. If wearing bifocals or multifocals, take extra care, particularly on stairs.

While getting up and walking:

- > get your balance before moving away from the bed or chair
- > use a walking aid for balance, rather than the furniture or walls
- > watch for spills or objects in the way, and tell staff about them
- > let staff know if you feel unsteady.

Avoiding dizziness:

Take your time to slowly get up from lying to sitting, and then sitting to standing

If you are allowed:

- > drink plenty of fluid such as water
- > keep your feet moving while you are sitting
- > sit out of bed to let your body get used to being upright
- > if you spend long periods of time in bed, raise the headrest and knee support to put you in a more seated position, rather than lying flat. Change positions often.

If you do fall, keep calm and call for help.

Preventing falls will help you stay as independent as possible.
