Message from the Minister

We are fortunate enough to have people from over 200 countries that have chosen South Australia as their home. They speak many languages and share with us their customs and traditions. They contribute to the vibrant and rich cultural heritage of this State.

A number of our well established migrant communities are ageing, in line with the overall trend of our State population. There are also a significant number of emerging communities with increasingly older populations, placing an emphasis on the need for support in the future.

Included within the Cultural and Linguistic Diversity Amongst Older People: A Demographic Overview, is a baseline of data and information relating to the country of birth, main language spoken at home and religious affiliation of older South Australians. Interestingly, around 1 in 6 older South Australians aged 65 years and over* do not speak English as a main language at home.

The demand for home and community care services continues to evolve. The Rann Government is committed to supporting older South Australians and we have increased the Home and Community Care (HACC) program funding by over 70% in the past eight years, to a total of $150 million. We are expecting another large injection of $24 million by 2010-11.

There has also been almost 200% growth in funding for South Australians from culturally and linguistically diverse backgrounds. Funding has increased from $2.6 million in 2001-02 to $7.7 million in 2008-09. This will go a long way to providing extra support and services to those that deserve our assistance.

I am proud to endorse this report, which is a useful resource that will assist future strategic planning for our multicultural community, and will be used to structure our services for those who have already contributed so much to our incredible blend of culture and traditions in South Australia.

Hon Jennifer Rankine MP
Minister for Ageing

*2006 Census, Australian Bureau of Statistics

1. Introduction and Overview

This report has been compiled to provide a baseline level of information to improve our understanding of the size, composition and diverse nature of our older population in South Australia.

In particular, the report provides a foundation for the Office for the Ageing (OFTA) to move towards a more strategic, evidence based approach to the funding of services to support older South Australians from culturally and linguistically diverse (CALD) backgrounds.

Three main indicators of cultural and linguistic diversity are highlighted in this report:

- Country of birth of person
- Language spoken at home
- Religious affiliation

For each of these indicators, the following data and information are presented:

- Population data for the following age groups:
  - Total population (all ages)
  - People aged 55 to 64 years
  - People aged 65 years and over
  - People aged 80 years and over
  - Analysis of the proportion of older people aged 65 and 80 years and over who are not proficient in spoken English*
  - Analysis of the proportion of older people aged 65 and 80 years and over who live in non metropolitan Adelaide*
- Population pyramids (graphs showing the number of males and females in each ten year age group)
- Thematic maps showing the spatial distribution of older people aged 65 years and over in the Adelaide, Gawler and Adelaide Hills area

In the final section, graphs are presented to show the number of migrants for each year of arrival from 1986 to 2006 for selected countries of birth.

These data are sourced from the 2006 Australian Bureau of Statistics Census of Population and Housing.

Overview of the CALD Population Aged 65 Years and Over

As shown in Graph 1, there were approximately 233,100 older people aged 65 years and over in South Australia in 2006. Analysis of this population by country of birth grouping shows that approximately one in five older people were born overseas in a mainly non English speaking country (43,400 people or 19% of the older population in SA).

Graph 2 shows the number of older people in South Australia by main language spoken at home. In 2006, approximately one in six older people do not speak English as a main language at home (36,200 people or 16% of the older population).

---

* Analysis of these proportions is not included for religious affiliation.

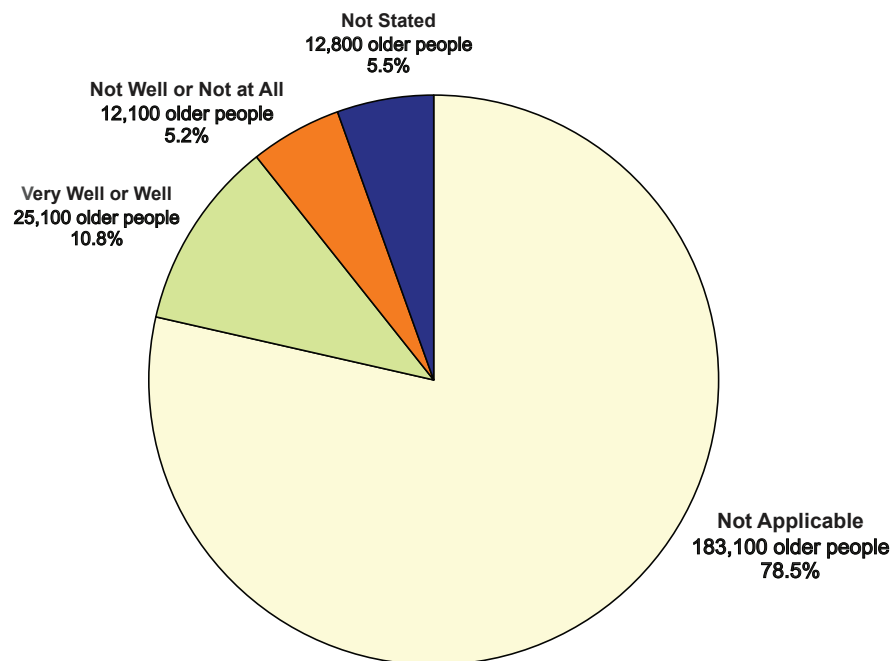

Graph 3 shows the number of older South Australians aged 65 years and over by proficiency in spoken English. Over one in 20 older people (5.2%) could not speak English well or at all. This corresponds to 12,100 older South Australians.

Growth from 2001 to 2006 in the Older CALD Population

From 2001 to 2006, the older CALD population aged 65 years and over grew faster than the older population born in English speaking countries and the total older population in SA.

From 2001 to 2006, the older CALD population aged 65 years and over born overseas in mainly non English speaking countries[1] grew by 10% in South Australia (from 39,500 to 43,400 people).

Over the same period, the older population born in mainly English speaking countries, grew by 4% (from 164,400 to 170,700 older people).

The total older population in SA over the five year period grew by 8%.

[1] Mainly English speaking countries are Australia, New Zealand, United Kingdom, Ireland, Canada, United States of America and South Africa.

2. Country of Birth

2.1 Largest Populations by Country of Birth – People of All Ages

As shown in Table 1, people born in Italy comprised the largest population group amongst people of all ages born overseas in mainly non English speaking countries (22,484 people). Germany, Greece, Netherlands, Poland, Vietnam and China also featured in the top five largest overall populations by countries of birth. Figures are also presented for people aged 55 to 64 years by birthplace.

Table 2 presents population data by birthplace for older people aged 65 and 80 years and over.

2.2 Older Populations Aged 65 Years and Over by Country of Birth

Amongst older people, the largest CALD populations (indicated by birthplace) were born in Italy (12,445 people), Greece, Germany, Netherlands and Poland.

There were also smaller, but significant numbers of older people born in Eastern European countries (including Hungary, Ukraine, Latvia and Lithuania) and South Eastern European countries (including Croatia, Cyprus, Serbia, Slovenia, Bosnia and Herzegovina, Estonia and Romania).

The overall age profile of people born in Vietnam, China and India is significantly younger, with the majority of their populations aged under 65 years. Despite their relatively younger populations, there were significant numbers in 2006 of older people in South Australia born in India (the ninth largest older CALD population with 835 people), Vietnam (741 people) and China (647 people). A similar pattern exists for people born in Malaysia, Philippines, Indonesia and Cambodia.

Clearly these are significant emerging communities.

2.3 Older Populations Aged 80 Years and Over by Country of Birth

There are a number of ageing migrant groups which have relatively older populations and significant numbers of people aged 80 years and over. In particular these include people born in Poland, Ukraine, Latvia and Hungary.

The highest number of older people from CALD backgrounds aged 80 years and over were born in Italy (2,557 people), followed by Poland and Germany (both with around 1,125 people) and Greece and the Netherlands (both over 800 people).

Table 1: People Born in Mainly Non English Speaking Countries All Ages and Aged 55 to 64 Years

2.4 Older People Aged 65 Years and Over by Country of Birth Living in Non Metropolitan SA

Table 3 presents information on the number of older people aged 65 years and over by county of birth, including the percentage living in non metropolitan SA and the percentage with little or no spoken English proficiency.

Non metropolitan South Australia refers to all areas of the State outside of the four metropolitan Adelaide regions. This includes people living in outer urban areas (including Adelaide Hills, Gawler and Fleurieu) as well as people living in rural and remote areas. Further data analysis will be undertaken relating to specific CALD populations in rural / remote centres.

Significant proportions of older people lived in non metropolitan SA for people born in the Netherlands (40%) and Germany (32%). Likewise, approximately one in three older people lived in non metropolitan SA for birthplaces including Spain (34%), Indonesia (33%), Austria (31%), France (31%) and Finland (31%).

Approximately one in five older people who reported they were born in Croatia, 'South Eastern Europe (not further defined)', Hungary, Slovenia or Latvia lived in non metropolitan South Australia.

Whilst only 9% of the total older population born in Italy (12,445 people) lived in non metropolitan SA, this represented over 1,100 people in 2006.

2.5 Older People Aged 65 Years and Over by Country of Birth With Little or No Spoken English

The highest proportions of older South Australians who had poor proficiency in spoken English were born in Cambodia (93%), Vietnam (86%) and China (78%). This was followed by approximately two in three older people born in Bosnia and Herzegovina and Iran.

Approximately half of all older people born in Greece, the Russian Federation and Turkey reported that they could not speak well or at all.

Around a third of older people born in Italy (38% of 12,445 people), Poland (31% of 2,290 people), Croatia (31% of 1,213 people) and 'South Eastern Europe' (not further defined) (31% of 964 people) had low English proficiency.

According to the 2006 Census, smaller proportions of older people who could not speak English well or at all were born in countries including Austria (2%), Germany (5%), the Netherlands (5%), Latvia (8%) and Malta (13%).

Census data also indicate that older women from CALD backgrounds generally have poorer proficiency in spoken English than men in the same category. 37% of older women from CALD backgrounds do not speak English well or at all compared to 28% of older men.

Data Source: Australian Bureau of Statistics 2006 Census of Population and Housing, CData 2006

2.6 Older People Aged 80 Years and Over by Country of Birth Living in Non Metropolitan SA

As shown in Table 4, generally smaller proportions of older people aged 80 years and over lived in non metropolitan SA (compared to the overall older population age 65 years and over).

For older South Australians aged 80 years and over, one in four people born in the Netherlands and one in five people born in Austria and Germany lived in non metropolitan SA.

In this same age group, approximately 14% older people born in India lived in non metropolitan areas. Interestingly nearly half of older people born in India were recorded in the Census as having little or no spoken English.

2.7 Older People Aged 80 Years and Over by Country of Birth With Little or No Spoken English

The data indicate that older people aged 80 years and over born in mainly non English speaking counties are generally less proficient in English than younger age groups.

As shown in Table 4, whilst the numbers of older people in this age group are relatively small, people born in Pakistan (100%), Singapore (100%), Vietnam (91%), Cambodia (90%), Iran (84%) and China (84%) had little or no spoken English.

Amongst the larger birthplace groups, over two thirds (70%) of older people aged 80 years and over born in Greece and over a half of this age group born in Italy (59%) and Croatia (52%) could not speak English well or at all.
