

Protect your baby

against RSV

Free immunisation now available.

RSV is a virus that causes cold-like symptoms and serious lung infections in babies and young children. With cases increasing over winter, it's time to protect your little one.

If you're pregnant, or have a young child who needs extra protection from RSV, you or your little one may be eligible for a safe and effective RSV immunisation.

Talk to your GP or usual immunisation provider about your eligibility and to book an appointment.
