

National Antimicrobial Utilisation Surveillance Program (NAUSP)

Antimicrobial agents included in NAUSP reporting

January 2021

The National Antimicrobial Utilisation Surveillance Program is funded by the Australian Government Department of Health. NAUSP is administered by the Antimicrobial Programs division, Communicable Disease Control Branch, Department for Health and Ageing, South Australia.

OFFICIAL

Introduction

The antimicrobial agents included in the National Antimicrobial Utilisation Surveillance Program (NAUSP) that are currently used in Australian hospitals are displayed below, arranged under their anatomical main group assigned by the World Health Organization (WHO).¹⁻³ For each agent the corresponding anatomical therapeutic chemical (ATC) classification (pharmacological subgroup and chemical subgroup) and WHO defined daily doses (DDD) are displayed.¹ The ATC is the internationally recognised and WHO endorsed drug classification system. The DDD is “*the assumed average maintenance dose per day for a drug used for its main indication in adults*”.¹ DDDs are displayed in grams, except where indicated.

The WHO does not assign DDDs to all products. Where a DDD has not been assigned by the WHO, NAUSP have assigned a DDD for systemic products based on available published literature. For topical agents where the WHO has not assigned a DDD, NAUSP have not assigned a DDD and there will be an “N/A” in the table below. In addition, for some agents that are included in NAUSP surveillance, there is not currently a WHO-assigned ATC code - in these cases a “N/A” is listed in place of an ATC code.

Not all of the included agents are registered with the Therapeutic Goods Administration for use within Australia. Unregistered antimicrobials used in Australia are accessed via the Special Access Scheme (SAS).⁴

Note: While every effort will be made to maintain the currency of this document, there may be a lag time between when a new antimicrobial is introduced and its inclusion in the following list. In general, the NAUSP aims to include all antimicrobial agents used within the Australian hospital system.
